

Tabular List Requirements & Descriptions

Shopping Cart	Have a shopping cart. The end-user can use the said cart to decide which items to buy in the final sale.
Payment	Must have a page for users to input payment information (credit/debit card) and the end-users ability to input billing/shipping information to purchase their order.
Maintainable, Secure, and Private	Must have a maintainable, secure, and private web experience, so users know they can trust us and have confidence in using the restaurant's services.
Categories	Shall be able to categorize foods into various common categories and display them to the end-users.
Accessibility	Henceforth, the online store must be accessible on different platforms for the various end-users the restaurant will acquire, e.g. dark mode, high contrast mode, etc...
